Business Model

Profile evidence coverage

100.0

STRONG EVIDENCE

Relative evidence from ROE, ROA and leverage available in Sectors data. It is separate from the Bagger Score. Strong Evidence.

MODERATE EVIDENCE

Relative evidence from recent year-over-year revenue and earnings growth. It is shown independently for research context. Moderate Evidence.

STRONG EVIDENCE

Evidence coverage across company description, sector and industry classification. This is an evidence-coverage score, not a business-quality verdict. Strong Evidence.

✦

Two layers, one research experience. Quantitative Signals describe what the market data measures; Assessment Factors organize the available company evidence. Assessment scores never feed the Bagger Score, avoiding double counting.

Why This Score?

The quantitative layer explains the composite score; the assessment layer explains what the available company evidence can and cannot support.

✦ SUPPORTING QUANTITATIVE SIGNALS

Growth (69.7), Quality (89.9), Valuation (69.0)

⌁ LIMITING QUANTITATIVE FACTORS

No dimension currently falls below the limiting threshold.
